Comprehension Check #8

Directions: Read the short passage. Answer the questions.

The pond is home to many different types of animals, insects and plants. A pond is a small area of still, fresh water. A pond is different than a stream because there is no moving water at a pond. The water at a pond is also very shallow. At the pond, you will find animals that live above the water and below the water. Ducks, birds, snapping turtles, frogs, and beavers are just some of the animals that live above water. Tadpoles, water beetles, crayfish and fish live below water at the pond.

1. What is a pond?

2. How is a pond different than a stream?

3. Name two animals that live above water.

4. Name two animals that live below water.

5. Name another animal that might live at the pond.

Name _____ Date _____
